---

## PROFESSIONAL SUMMARY

Software Engineering student focused on backend development. Builds personal and academic projects with Python, Flask, Java and Spring Boot, applying REST API design, JWT authentication, relational databases, Docker and automated testing. Seeking an internship opportunity to develop practical experience and continue growing technically.

## EDUCATION

**Bachelor of Software Engineering** - UNINTER (Centro Universitario Internacional), Colatina, ES

Expected completion: December 2027

## PROJECTS

**Purchase Orders API** | Python, Flask, PostgreSQL, Docker, JWT, Swagger, Pytest

- Built a REST API for purchase-order and item management, with JWT authentication and authorization.
- Modeled and persisted data in PostgreSQL, with a Docker-based application environment.
- Documented endpoints with Swagger and added Pytest coverage for core business rules.

**Task Management API** | Java, Spring Boot, MySQL, Maven

- Built a REST API for task management using Java and Spring Boot.
- Implemented persistence with Spring Data JPA and MySQL; managed dependencies and builds with Maven.

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, SQL

**Frameworks:** Flask, Spring Boot

**Backend:** REST APIs, JWT, Swagger

**Databases:** PostgreSQL, MySQL, Neo4j

**Tools:** Git, GitHub, Docker, Maven, Postman, WSL2, Figma, Draw.io
